

April Launch Report #2

A couple of great photos that we missed sending in the earlier report.

The first is from Jamin Miller's Go-Pro camera that was placed under the launch pad last weekend (left). This is Andrew Kleinhensz' Zorba, a 5.5" diameter rocket that is 6.5 feet tall and flew with an AT J540-R. If you look closely, you can actually see flame come out of three of the Medusa nozzles.

At the MTMA launch the weekend before, Andrew flew his EZI-200 (a knock-off of the EZI-65) with an AT I200W and had a great flight.
